

Specify the Message Service Center on a GSM Modem

To send out an SMS, the modem will send the message to the short message service center (SMSC) of the operator.

The Service Center address is normally automatically detected by the modem.

If needed, you can also force the Message Service Center address using following syntax in the SMS Destination field:

where the 0032123456789 is the address of the Service Center.

- Note -

For the Service Center Address do not use the + prefix syntax. eWON will replace the "+" sign by a ',' sign and thus will fail. So instead of using "+32123456789" use "0032123456789".

Command to use in Basic Script:

SendSMS 047612345678,gsm,0032123456789 (instead of 0476224618,gsm,0) where the 0032123456789 is the address of the Service Center.
